

GOVERNANCE. PEOPLE. PROCESSES. TECHNOLOGIES.

## Application Systems Analyst

DirectViz Solutions, LLC, a high-level strategic consulting services firm that meets mission needs for commercial and government clients, is seeking an Application Systems Analyst, Reporting Manager. This position will be located at Camp Humphreys, Korea. Assignments are often self-initiated and work is checked through consultation and agreement with others rather than by formal review of superior, so applicant must be able to perform in this environment.

### Responsibilities:

- Analyze and evaluate major system project requirements of considerable complexity requiring a thorough understanding of all parameters affecting and interfacing with the system.
- Review user requirements and provide direction in the identification of problem and potential resolution.
- Provide analytical support in the conceptualization, development and implementation of complex, multiple inter-linked systems.
- Define system objectives and prepare system design specifications to meet user requirements and satisfy interface problems.
- Formulate logical statements of user requirements and develop solutions through application of systems and methods of engineering techniques.
- Review alternate approaches and select appropriate methodology.
- Address complex problems, where analysis of situations or data requires, and evaluate often intangible factors.
- Review literature, patents, and current practices relevant to the solution of assigned projects.
- Recommend corrections in technical applications and analysis.
- Evaluate vendor capabilities to provide required products or services
- Accountable for technical contribution which result in profitable return on technical investment.
- Apply advanced technical principles, theories, and concepts.
- Contribute to the development of new principles and concepts.
- Work on unusually complex technical problems and provide solutions which are highly innovative and ingenious.
- Work under consultative direction toward predetermined long-range goals and objectives.
- Determine and pursue courses of action necessary to obtain desired results.
- Develop advanced technological ideas and guide their development into a final product. Erroneous decisions or recommendations would typically result in failure to achieve critical organizational objectives and affect the image of the organization's technological capability.
- Serve as organization spokesperson on advanced projects and/or programs.
- Act as advisor to management on advanced technical research studies and applications.
