

GOVERNANCE. PEOPLE. PROCESSES. TECHNOLOGIES.

VMWARE ADMINISTRATOR

DirectViz Solutions, LLC, a high-level strategic consulting services firm that meets mission needs for commercial and government clients, is seeking a VMWARE Systems Administrator. This position will be located in Seaside Ca and requires a Top Secret or Secret/SSBI security clearance.

Virtual Infrastructure Engineer with a broad range of technical skills, including VMWare vSphere, VMWare vCloud/vRealize Solutions, Powershell Scripting, Infrastructure Automation, VMWare View or Citrix Solutions to manage the Virtual Infrastructure for a DoD Client.

The ideal fit would be a candidate who has experience managing a mixed production Linux/Windows environment. The candidate should be able to multitask, mentor team members and interface with the client.

Duties and Responsibilities:

- Serve as a team member to develop, implement and maintain a VMware virtualization solution for a large enterprise
- Provide subject matter expertise in areas of process improvements, performance managing and java applications hosting
- Perform full end-user computing life cycle to include architecture, design, build, implementation, remote management, patch management and decommissioning of assessing and metrics gathering for large enterprise environments
- Identify key performance indicators in VMware and VDI environment and help capacity planning
- Implement industry best practices for configuration management and change management of VMware solutions
- Leverage skills, knowledge and capabilities of all team members to create deliverables and deliver on time and manage communications to keep people informed
- Create, build, manage, monitor and deploy virtual machines
- Monitor case backlog and advise less-experienced technical support agents on problem resolution procedures and advise management on issues or trends

Qualifications:

Top Secret or Secret/SSBI

Must have 4-5 years' relevant system administration experience to support large virtualized enterprise environment

Must have experience architecting highly available data center solutions using VMware vRealize Integration Solution

VMware, Oracle solutions on Cisco UCS blade systems or HP, NetApp and/or Hitachi hardware

- Expert level experience with vRealize Automation: vRA and vROps, vSphere, ESX/ESXi, VMware View and Citrix VDI products
- Experience with Microsoft Windows servers, VMware PowerCLI, and Redhat Linux
- Experience with diverse SAN hardware platforms (NetApp, Cisco, HDS, and Brocade) and FC, iSCSI, NFS protocols
- Experience designing and implementing highly available infrastructure solutions using VMware. Must be hands-on with vSphere/ESXi 6.x and VMware site recovery manager
