Developer/Programmer (Java/.Net/Oracle)

DirectViz Solutions, LLC, a high-level strategic consulting services firm that meets mission needs for commercial and government clients, has multiple positions for a full-time Developer/Programmer (Java/.Net/Oracle). This position, located in “Pensacola, FL”.

Responsibilities:

Participate in a team environment performing developer/programmer services for high priority systems/applications. Participate in complex system projects; design and development of software systems, scientific analysis, and use mathematical models to predict and measure outcome and consequences of design. Perform revision, repair, or expansion of existing programs to increase operating efficiency or adapt to new requirements. Write, analyze, review, and rewrite programs, using workflow charts and diagrams, applying knowledge of computer capabilities, subject matter, and symbolic logic. Participate in requirements definition, project management, applications design, development, documentation, testing, and deployment activities. Analyze user needs to determine technical requirements. Work independently under specified objectives; work according to approved statements of requirements and detailed specifications; resolve problems and deviations according to established practices; apply judgment in selecting among authorized procedures and seek assistance when guidelines are inadequate, significant deviations are proposed, or when unanticipated problems arise. Refine and customize products such as forms, reports, SQL and PL/SQL procedures to meet IT requirements using developer products. Analyze information to determine, recommend, and plan installation of new systems or modification of existing systems. Assist in configuration and installation of developer products on laptop and/or desktop computer configurations. Consult with and assist computer operators or system analysts to define and resolve problems. Determine whether networks, workstations, central processing units, or peripheral equipment are responding to a program's instructions. Analyze performance and take action to correct deficiencies based on approval of supervisor/higher-level staff. Apply business and data manipulation principles and methods to technical problems to arrive at automated solutions. Develop software system testing or validation procedures. Identify problems uncovered by testing or customer feedback, and correct problems or refer problems to appropriate personnel for correction. Compile and write documentation of program development and subsequent revisions, inserting comments in the coded instructions so others can understand the program. Write or contribute to instructions or manuals to guide end users. Possess high-level oral and written communications skills; effectively communicate with all levels of client management, contractor managers and client agency representatives; adept in generating and conducting briefings, presentations

At least three (3) years of recent, industry accepted experience in complex projects involving IT software development and/or programming. Position requires IA Workforce (IAWF) certification IAW DOD 8570.01-M and SECNAV M-5239.2.
